Information obligations according to art. 33 REACH Regulation (EC) no.1907/2006

Dear Sir or Madam,

The company Kählig Antriebstechnik GmbH produces and distributes brushless and brush DC motors as well as DC gear motors in the range of 2.5 watts upwards. These are considered as "products" according to the REACH Regulation and, therefore, we are subject to the information obligation in the supply chain, as soon as one of the products acquired by us contains a Substance of Very High Concern (SVHC) in a mass concentration exceeding 0.1 percent.

After the update of the candidate list (rev.27.06.2018), the substance Lead (CAS number 7439-92-1) was newly added. As our products resp. the individual parts (smallest product) partially exceed the limit value of 0.1% of lead, we hereby fulfil our duty to inform you about this.

Lead is contained in many components made of aluminium, copper and steel alloys in order to facilitate the workability of the workpiece, for example.

As lead is bonded as alloy component and, therefore, no exposition can be expected, no additional information is necessary for the safe use.

With kind regards

p. o. Alexander Buss

Kählig Antriebstechnik GmbH
